

Installing Create-A-Label Printer Drivers

Before using the Create-A-Label software included with PASS 6.0, bar code printer drivers must first be installed. The following procedures outline printer driver installation.

Windows 95, Windows 98 and Windows ME

When Create-A-Label is first executed, a printer installation dialog is displayed. Install printers as follows:

1. **Install Printer Drivers** - Select the printer driver corresponding to the Dynalab Printer being used (the printer does not have to be connected to the PC). Press **Install**.
2. Press **Close**.

Windows NT 4.0 and Windows 2000

Windows NT drivers must be installed manually as follows:

1. **Open the Printers folder** - To open the printers folder in Windows NT, select **Start > Settings > Printers**
2. **Begin Add Printer Process** - Select **Add Printer**
3. **Add Printer Wizard** - Select My Computer. Press **Next**.
4. **Add Printer Wizard** - Select a printer port (A Dynalab printer need not be connected to the PC). Press **Next**.
5. **Add Printer Wizard** - Select **Have Disk**.
6. **Install From Disk** - In the **Copy Manufacturers Files From** text box enter: **C:\CAL3V202\Drivers\NT40** Press **OK**.
7. **Add Printer Wizard** - Select the appropriate Dynalab Printer model (the selected printer need not be connected to the PC). Press **Next**.
8. **Add Printer Wizard** - If necessary, adjust the printer name and default settings. Press **Next**.
9. **Add Printer Wizard** - If necessary, adjust the shared settings. Press **Next**.
10. **Add Printer Wizard** - Select **No** (Unless there is a Dynalab Printer attached to the PC). Press **Next**.
11. **Files Needed** - If, during printer driver installation, Windows NT requests a file, enter: **C:\CAL3V202\Drivers\NT40** in the **Copy Files From** text box. Press **OK**.
